OVERVIEW

Refuel International is the major supplier of Military Aviation refuelling vehicles to the Australian and New Zealand Defence Forces. The product line includes Refuellers, Hydrant Dispensers, Transportable Pumping Systems for field deployment and Skid-mounted Modules for helicopter and shipboard installations.

All our military vehicles are suitable for JP-8 fuel. They are proven by the Australian Defence Force and use NATO stock number (NSN) listed parts.

A pioneer in quality products and solutions for high flow specialist fluid transfer applications, Refuel International is the preferred partner of major oil companies worldwide, into-plane operators and military defence organisations.

design to withstand the harshest conditions

HYDRANTS CARTS

Refuelling hydrant carts are proven as an effective and efficient method of aviation refuelling. With a small built and low carbon footprint, they are gaining popularity at the world's busiest airports by reducing congestion on the tarmac, thus saving time and money for operators.

REFUELLERS

Refuel International Refuellers are designed for efficient and safe aircraft fuelling from the refueller's tank at airports where underground hydrant systems are not available. Our proven design incorporates innovative systems with industry standard components. All our refuellers are designed to achieve fast and efficient flow rates.

SKID SYSTEMS

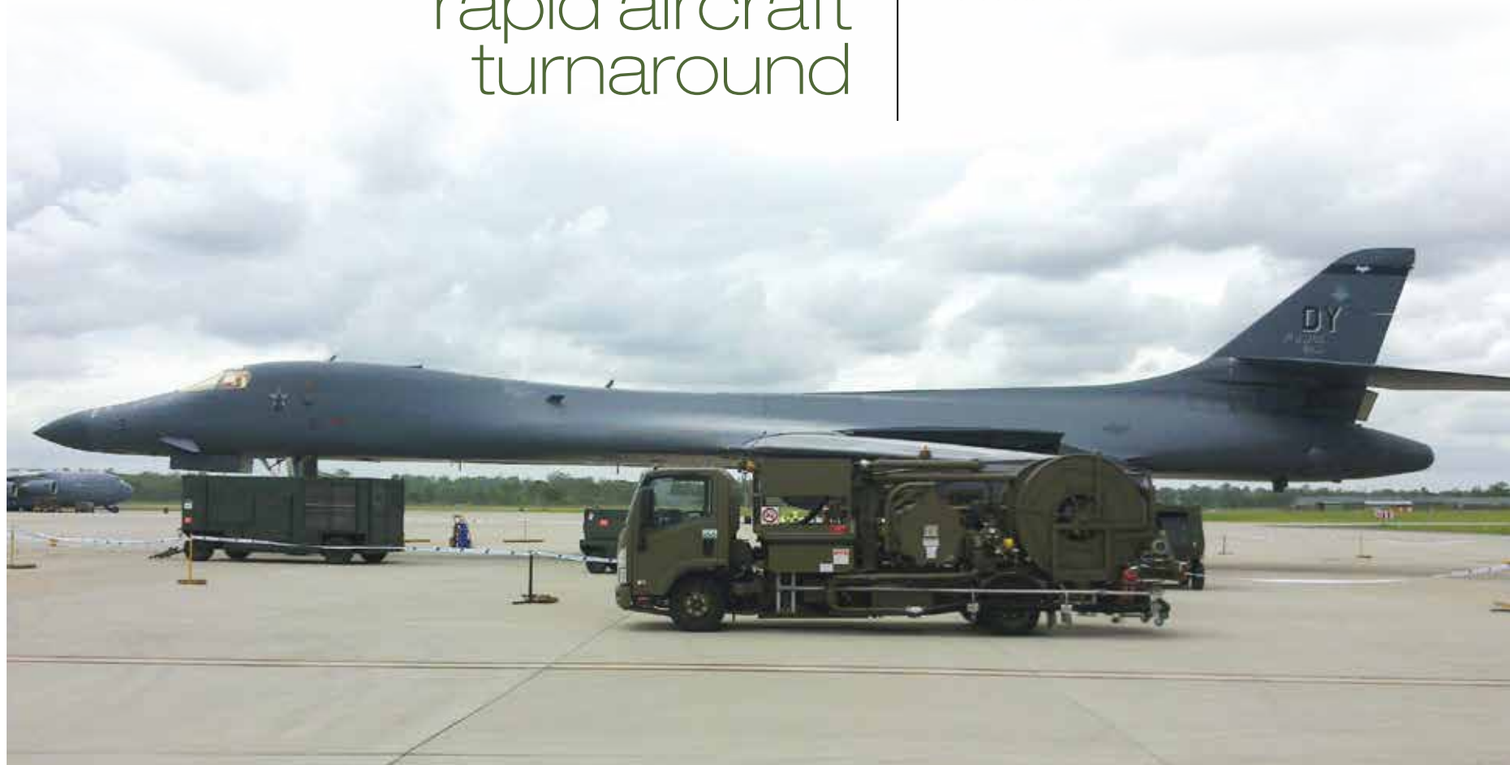

These units enable personnel to refuel all types of aircraft, load maritime storage tanks, transfer fuel or self-fuel storage and service tanks. The pumping skid delivers product directly from the fuel tank via a pump and filtration system up to the refuelling skid. Fuel is then dispensed via a filter, meter and hosereel into the aircraft.

HYDRANT DISPENSERS

A typical dispenser has an elevating scissor lift platform with a reach of 4.2 metres to accommodate all aircraft types (including A380), two underwing platform-deck hoses supported by a hydraulic boom, plus single or dual rear hose-reels. Our dispensers can achieve high flow rates of up to 4,000 L/min (1,000 USG/min) for rapid aircraft turnaround.

high flow rate with rapid aircraft turnaround

proven technology of success *for over 50 years*

BUNKERING VEHICLE

Refuel International Bunkering Vehicle has been designed for dual side operation and maximises operator comfort and safety. It eliminates manual handling and accurately measures transferred quantity. A crane is used to deliver the loading coupler to the ship and compensates for changing tides. It is easy to operate with hydraulically driven hosereels and a remote control for the crane.

OUR MISSION

Refuel International's mission is to be the refuelling equipment and service supplier most respected for its quality, reliability, and performance. We strive to provide the highest quality equipment with competitive market pricing. We commit ourselves to continuously improve our operations and enhancing our customers' experience.

ABOUT US

Refuel International is a global manufacturer and supplier of refuelling vehicles and support services. Our vehicles are designed to operate and endure all conditions and environment with the flexibility of 'tailor-made' options for your particular situation. Recognising that the purchase of equipment is the start of our customer's long-term investment, the company has reposition itself from being simply an OEM for refuelling equipment, to a solutions provider, offering innovative, custom-designed solutions that facilitate asset utilisation, minimise maintenance downtime and exceed their expectations.

As a **ONE-STOP** business support provider, Refuel International is committed to continued growth as a leader in quality products for specialist fluid transfer applications. At Refuel International, we innovate, grow and achieve market leadership through producing world-class solutions. Our success is achieved with passion and professionalism, and a commitment to upholding our shared values and ethics. We work closely with our customers and industry partners to understand their challenges and specifications and provide them with reliable products, on-time delivery, and competitive international pricing.

Complementary to our equipment offerings, our service division provides international support through our regional employees in Asia and Australia. We actively work to transfer service knowledge to our customers and integration partners. This unique, in time zone, or on-site service and support capability sets Refuel International apart from our International counterparts.
