intelligent | solid | reliable

Refuel International's electrical system "OCTO" is the only system in the industry with IECEX and ATEX certification. OCTO provides comprehensive management for the refuelling equipment, and is the SOLUTION that improves serviceability and safety, while maximizing productivity and reducing costs for customers.

OCTO is designed in such a way that it decreases complexity, is easy to use and enables real time data visibility. The 'Touch-Screen' in-cab provides Interlock Status and other relevant warnings on the screen.

A newly improved reliability feature is the self-diagnostic sensor, which allow quick and simple fault diagnosis.

Parts can be easily replaced on the tarmac or workshop, reducing downtime and avert drive aways.

OCTO captures all operational data such as refuelling time, number of operations and measures performance while still guaranteeing safety. It incorporates a telemetry system which allows for remote monitoring and data access. This enables more swift and precise corrective actions to be taken, and aids in issue traceability.

With a smaller cab footprint, OCTO can be easily retrofitted onto older refuelling vehicles. Refuel International can also customise the system to suit individual operating process.

FEATURES & BENEFITS

- Easy usability
- Cost efficient
- Touchscreen in-cab console
- Telemetry system
- Easy installation and maintenance
- Non-contact interlock switches
- Dual certified - IECEX and ATEX
- Real-time data login
- Smaller cab footprint allows for more in-cab installations
- Self-diagnostic sensors such as short circuit, wire break and faulty sensors
- Remote system access for troubleshooting and diagnostics
- 12V or 24V capable
